

# ADIDAS SALES DATA ANALYSIS

## Key Findings and Business Recommendations

Analysis period: January 2020 - December 2021

### Executive Snapshot

This project analysed Adidas sales performance across products, regions, retailers, sales methods and time. Corrected sales revenue was calculated from Units Sold x Price per Unit. The analysis focused on identifying the major drivers of revenue and profitability, understanding differences across markets and channels, and translating the results into practical business recommendations.

| Performance Indicator | Result                |
|-----------------------|-----------------------|
| Total Sales           | \$120.17M             |
| Operating Profit      | \$47.22M              |
| Units Sold            | 2.48M                 |
| Top Product           | Men's Street Footwear |
| Top Region            | West                  |
| Top Retailer          | West Gear             |
| Top Sales Method      | Online                |
| Strongest Quarter     | Q3                    |

### Dashboard Overview

The Excel dashboard below summarises the core KPIs and provides interactive views of retailer, regional, product, monthly and channel performance.

Figure 1. Adidas Sales Performance Dashboard (2020-2021)

# 1. Key Findings

## 1.1 Overall Business Performance

Across the two-year dataset, Adidas recorded \$120.17 million in sales, \$47.22 million in operating profit and 2,478,861 units sold. The PivotTable average of row-level operating margins was 42%. For aggregate profitability, Operating Profit divided by Total Sales gives a weighted margin of approximately 39.3%.

## 1.2 Product Performance

Footwear generated \$79.78 million, approximately 66.4% of total sales, compared with \$40.39 million (33.6%) from apparel. Men's Street Footwear was the strongest individual product line at \$27.68 million, followed by Women's Apparel at \$23.87 million and Men's Athletic Footwear at \$20.58 million.

Men's Street Footwear and Women's Apparel together generated approximately \$51.55 million, or 42.9% of all sales, indicating a meaningful concentration of revenue in two product lines.

## 1.3 Regional Performance and Consistency

The West was the strongest region overall, generating \$36.44 million in sales and \$13.02 million in operating profit. It ranked first in both 2020 and 2021 and led monthly sales in 14 of the 24 months. The Northeast ranked second overall at \$25.08 million, followed by the Southeast (\$21.37M), South (\$20.60M) and Midwest (\$16.67M).

At state level, New York was the highest-selling state at approximately \$8.67 million, narrowly ahead of California at \$8.58 million, followed by Florida at \$7.82 million and Texas at \$6.61 million. Late in 2021, leadership became more distributed: the South led August-October and the Northeast led November-December.

## 1.4 Time Trends and Seasonal Pattern

Recorded sales were substantially higher in 2021 (\$95.93M) than in 2020 (\$24.24M), but the difference should not automatically be interpreted as organic growth because 2020 contains uneven regional-month coverage.

Q3 was the strongest quarter in both years and generated \$35.25 million across the full period. In 2021, sales rose from \$18.78 million in Q1 to \$23.79 million in Q2 and peaked at \$28.06 million in Q3 before moderating to \$25.30 million in Q4. July 2021 was the highest-sales month at \$10.37 million, closely followed by December at \$10.34 million.

The repeated Q3 strength suggests an observed July-September seasonal pattern, but two years of data - particularly with incomplete 2020 coverage - are insufficient to establish a robust long-term seasonal cycle.

## 1.5 Retailer Performance

West Gear was the strongest retailer overall, leading Total Sales (\$32.41M), Operating Profit (\$12.20M) and Units Sold (625,262). Foot Locker ranked second overall at \$29.02 million, while Sports Direct ranked third at \$24.62 million and recorded the highest average row-level operating margin at 44%.

Retail leadership changed over time. West Gear led in 2020 at \$11.70 million, but Foot Locker became the leading retailer in 2021 at \$23.28 million, followed by Sports Direct at \$22.63 million and West Gear at \$20.71 million. Retailer strength also varied geographically: Foot Locker led the Midwest, Northeast and Southeast; Sports Direct led the South; and West Gear dominated the West.

## 1.6 Sales Method / Channel Performance

Online was the strongest sales method overall, generating \$44.97 million in sales, \$19.55 million in operating profit and 939,093 units sold. Outlet generated \$39.54 million and In-store \$35.66 million.

In-store nevertheless generated the highest revenue per unit at approximately \$51.69, compared with \$47.88 Online and \$46.53 through Outlet. Using Operating Profit divided by Total Sales, Online had the strongest weighted channel margin at approximately 43.5%, compared with 37.7% for Outlet and 35.8% for In-store.

Channel performance differed by region: Online led the Midwest and Southeast, In-store led the Northeast, and Outlet led the South and West. In the South, In-store sales were only about \$0.34 million compared with \$9.20 million Online and \$11.06 million through Outlet.

1.7 Product Performance Across Regions

Men's Street Footwear demonstrated the broadest geographic strength. It was the highest-selling product line in four of five regions: Midwest (\$4.71M), Northeast (\$6.84M), Southeast (\$4.69M) and West (\$7.39M). The South was the exception, where Women's Apparel led at \$4.22 million.

Figure 2. Product x Region sales heatmap

The heatmap makes the geographic pattern visible at a glance: Men's Street Footwear is strong across most regions, while the West shows broad product depth, including high sales for Women's Apparel and Men's Athletic Footwear.

1.8 Product Momentum

All six product lines recorded substantially higher sales in 2021 than in 2020, so the available data does not show a clear product line with an overall year-over-year decline. Men's Street Footwear remained especially strong in 2021, with high sales during May-August and another major peak in December. Women's Apparel also showed strong 2021 performance.

Because total recorded sales were much higher in 2021 and 2020 coverage was uneven, these changes should be described as increases in recorded sales rather than definitive organic demand growth.

2. Business Recommendations

**Prioritise high-performing product lines.** Protect availability and marketing support for Men's Street Footwear, which leads overall sales and four of five regions. Women's Apparel should also receive strong support because it is the second-largest product line and leads the South.

**Use region-specific product strategies.** Do not apply the same product mix everywhere. Maintain broad Men's Street Footwear availability across the Midwest, Northeast, Southeast and West, while giving Women's Apparel

particular attention in the South. The West warrants deeper inventory breadth because several product lines perform strongly there.

**Strengthen Online while preserving regional channel differences.** Online should remain a major strategic channel because it leads sales, profit and units sold overall. However, support In-store strength in the Northeast and Outlet strength in the South and West rather than shifting every market toward the same channel.

**Prepare inventory ahead of strong sales periods.** Use repeated Q3 strength as an input to demand planning. Prepare inventory, fulfilment capacity and campaigns ahead of July-September, with additional attention to December because 2021 showed a strong year-end spike. Treat this as a planning signal until more years confirm the pattern.

**Manage retailer partnerships by market.** West Gear deserves strategic attention because it leads overall sales, profit and volume, but Foot Locker and Sports Direct became stronger in 2021. Partnership decisions should consider both total contribution and recent performance, as well as which retailer is strongest in each region.

**Investigate weak channel-region combinations.** The very low In-store contribution in the South deserves investigation. Examine store footprint, product availability, pricing, promotions and retailer coverage before deciding whether to improve the channel or redirect resources toward Online and Outlet.

**Protect the West while developing emerging regions.** The West should remain a priority for inventory and partner support. At the same time, late-2021 leadership by the South and Northeast suggests opportunities outside the West that should be monitored before long-term reallocations are made.

**Use profitability alongside revenue.** Evaluate products, retailers and channels using operating profit, weighted margin and units sold as well as revenue. Online leads revenue and profit, while In-store generates more revenue per unit; these differences can support better pricing and channel decisions.

**Improve forecasting and data quality.** Extend the dataset beyond two years and validate the uneven 2020 coverage before making strong growth or seasonality claims. Where available, add promotions, inventory, discounts and marketing activity to improve explanations and forecasts.

### 3. Management Takeaway

Adidas performance is driven by a combination of product, geography, retailer and channel. Men's Street Footwear is the strongest product line, the West is the largest region, West Gear is the strongest retailer overall, and Online is the leading sales method. However, these patterns are not uniform: Women's Apparel leads in the South, retailer leadership shifted in 2021, and the strongest sales method changes by region. The central implication is therefore to combine national strengths with region-specific product, channel and retailer strategies.

### 4. Analytical Notes and Limitations

- The dataset covers January 2020 through December 2021. Two years are useful for exploratory trend analysis but limited for confirming long-term seasonality.
- Corrected Total Sales was calculated from Units Sold x Price per Unit. Findings in this document use the corrected sales values.
- 2020 contains uneven regional-month coverage, so large 2020-to-2021 increases should not automatically be interpreted as organic growth.
- The dataset has no customer identifier; conclusions therefore refer to aggregate sales/purchasing patterns rather than individual customer behaviour, loyalty or repeat purchases.
- No official sales targets or market benchmarks were supplied, so the analysis does not claim performance against formal targets.

- Average Operating Margin in a PivotTable differs from a weighted business margin. For aggregate decisions, Operating Profit divided by Total Sales is generally more informative.

## 5. Portfolio Summary

This project demonstrates an end-to-end Excel data analytics workflow: business-problem interpretation, data validation and correction, PivotTable analysis, KPI development, multidimensional analysis across products, regions, retailers, channels and time, dashboard creation, insight generation and business recommendation development. The analysis moves beyond identifying the largest values by examining consistency, profitability, regional variation, channel behaviour and changes over time.
